Profile Summary

Computer Science graduate with 1.5+ years of experience as a DevOps Engineer. Skilled in automating and securing cloud infrastructure and building reliable, scalable deployment workflows.

Skills

Languages: Python, Go, Bash Scripting
Cloud: AWS (EC2, S3, EKS, ECS, ECR, IAM, CloudWatch, VPC, ALB)
DevOps Tools: Docker, Kubernetes, Jenkins, Argo CD, Terraform, SonarQube, Trivy, Prometheus, Grafana
Databases: MySQL, PostgreSQL, NoSQL

Experience

Devlogic Solutions Pune
DevOps Engineer *05/2025 – Present*

- Provisioned 10+ EC2 instances across multiple VPCs with public/private subnets, security groups, and least-privilege IAM roles
- Configured ALB traffic distribution and CloudWatch alarms for CPU and disk usage to support proactive incident response
- Wrote Bash scripts for process monitoring, server health checks, and scheduled S3 backups on Linux servers
- Applied Kubernetes rolling updates on AWS EKS to support zero-downtime application deployments
- Supported HPA configuration on EKS using CPU-based scaling policies for variable workloads

Projects

AWS EKS GitOps Pipeline 2025
Terraform, Jenkins, Argo CD, Prometheus, Grafana

- Provisioned an AWS EKS cluster and supporting VPC, subnet, and security group infrastructure using Terraform
- Built a Jenkins pipeline to build and push Docker images and deploy applications to EKS through Argo CD
- Configured Argo CD to synchronize Kubernetes manifests from GitHub with the EKS cluster
- Set up Prometheus and Grafana for metrics, dashboards, and email alerts for critical issues

DevSecOps CI/CD Pipeline 2025
Jenkins, AWS, SonarQube, OWASP Dependency-Check, Trivy, Docker

- Set up Jenkins on AWS EC2 to automate builds, tests, and deployments for a Node.js application
- Integrated SonarQube analysis and quality gates to stop builds that failed configured code quality and security checks
- Added OWASP Dependency-Check to identify known vulnerabilities in third-party application dependencies
- Configured Trivy to scan Docker images for vulnerabilities before pushing images to Amazon ECR

OpsForge – GitOps-Based Internal Developer Platform 2026
Terraform, Kubernetes, Argo CD, Helm, Backstage, AWS

- Built a GitOps-based platform to automate service provisioning, deployment configuration, and infrastructure changes
- Used Terraform to manage AWS infrastructure including EKS, ECR, IAM, networking, and environment-specific resources
- Configured Argo CD ApplicationSets and Helm charts to manage application deployments through Git-based release workflows
- Added Kubernetes network policies, resource limits, health probes, autoscaling, and Pod Disruption Budgets
- Integrated Prometheus, Grafana, External Secrets, Route 53, and cert-manager for monitoring, secrets, DNS, and TLS

Education

Prof. Ramkrishna More ASC College, Akurdi Pune
BSc Computer Science *2022 – 2025*

- Represented University in Technical Fest
- Top 3% in Academics
